

GeoTility Geothermal Installations Corp.

GeoTility Geothermal Systems has led the geothermal heating and cooling systems industry for the past two decades. Projects have ranged from small residential projects to large commercial and institutional systems. With the development of a new hybrid drill rig designed to drill vertical holes in a confined spaces, there are new possibilities to convert existing urban structures to geothermal. "I believe it is our responsibility to promote responsible use of our energy sources and how we all can benefit as a result," says Jim Leask, President of GeoTility Geothermal Systems. "At GeoTility, it's a culture we live and breathe. From the classroom we sponsor at Okanagan College to the internal environmental challenges we run in our company, we do what we can to contribute to long-term sustainability."
